ABOUT ME

Result-oriented and passionate software engineer with **two years** of professional experience. Continuously learning about the latest technologies helps me quickly adapt to any situation. Open-source enthusiast, interested in backend, infrastructure, and systems development.

TECHNICAL SKILLS

Languages: Python, Javascript, Typescript, Golang, Java, Kotlin, SQL
AWS: Lambda, DynamoDB, ECS, Fargate, EC2, CDK
Frameworks: Django, Express, Android
Databases: Postgres, MongoDB

EXPERIENCE

Zluri

Senior Software Engineer

March 2023 – Present

Bengaluru, India

- Improved the notification service through infrastructure improvements and minimal impact. This significantly decreased delivery latency from **2 hours to less than 1 min during peak hours**.
- Led the effort in finalizing a **Postgres** ORM by conducting POCs and upskilling peers. This resulted in improved code quality and reducing delivery time.
- Built a API shadow testing framework as part of the database migration. Automated alerts and reports provided visibility into failing APIs, helping fasttrack fixes and **reducing the lead time of the project by at least 25%**.
- Performed bug bashes in legacy modules, **reducing on-call tickets by 50%**. Also led initiatives in improving code quality and reducing tech debt.

Software Engineer

March 2023 - December 2023

- Lead the development of a greenfield project, *Access Reviews* over 3 months. Delivered with exceptional code quality and a extensible design. The MVP built was a great success with customers and **created a strong new revenue stream** and further investments in the product.
- Lead the charge in improving code quality by leading the migration to **Typescript** and introducing various other linting and code clean up processes, improving long term maintainability.
- Ideated & implemented a development workflow for the organization using feature environments, automated testing etc. This became a bedrock of all engineering efforts, **boosting engineering productivity by upto 30% and improved confidence in product quality**.
- Built a monitoring and alerting system for all backgrounds jobs in the organization. Alerts helped on-calls with proactive resolution preventing down time and **reduced customer complaints by 50%**.

Amazon - AWS

Software Engineer

Feb. 2022 – March 2023

Bengaluru, India

- Created a service to automatically parse maintenance notifications and suppress relevant alarms. This **brought down high severity tickets by 50% week over week**.
- Reduced weekly effort spent on running manual and protacted regression tests by automating it, **reducing time spent on from 24 developer-hours down to 8 hours** every week.
- Worked on an easily deployable network virtualisation product that was integrated with automated network config CI/CD and regression testing pipelines. The project **reduced cost** of physical infrastructure by providing for virtualized networking labs.

Oracle

Software Engineering Intern

June 2021 – July 2021

Bengaluru, India

- Improved performance and accessibility of historical data by adding support for alternative data stores in the *vmstat* command for Oracle Solaris.

EDUCATION

BITS Pilani

B.E. Electronics and Instrumentation Engg. (CGPA: 8.29/10)

Hyderabad, India

Aug. 2018 – July 2022

OPEN SOURCE CONTRIBUTION

Django | Python Web Framework

- Fixed** a data-corrupting bug related to concurrent select and update on Postgres tables.
- Fixed** a bug that issued redundant SQL queries, improving performance during insertions.
