EXPERIENCE

Amazon

July 2025 – Present

Software Development Engineer 2

Bengaluru, India

- Designed and delivered an **end-to-end replacement** of a legacy feed health aggregation and alerting system. Built the core aggregation logic, deployed infrastructure across **3 AWS regions** processing **1M+ feed health signals daily**, and executed a **staged rollout**.
- Designed a Step Functions-based deferred alerting system that **prevents false-positive tickets** during transient failures lasting under 15 minutes. Solved existing race conditions in event-driven delivery using monotonic ordering keys, conditional writes, and workflow ownership checks.
- Implemented customer-managed encryption key support across multiple microservices, **solving launch-blocking security challenges** and **established encryption patterns** adopted by the team for long term maintainability.
- Designed service metrics and composite alarms for operational readiness; upgraded Java runtimes, fixed flaky tests, tuned DLQ alarms, and resolved pagination failures, **reducing operational noise** for on-call engineers.

Zluri

March 2023 – March 2025

Senior Software Engineer

Bengaluru, India

- Led the development of a greenfield project, [Access Reviews](#), over 3 months. The MVP **created a new revenue stream**, growing the product team from 2 to 10 engineers.
- Accelerated a database migration by building an API shadow testing framework and finalizing a **Postgres** ORM. Automated alerts surfaced failing APIs, **reducing project lead time by 25%**.
- Ideated & implemented a development workflow for the organization using feature environments and automated testing, **boosting engineering productivity by up to 30%** and improving confidence in product quality.
- Improved the notification service through infrastructure improvements, decreasing delivery latency from **2 hours to less than 1 min** during peak hours.

Amazon - AWS

Feb. 2022 – March 2023

Software Engineer

Bengaluru, India

- Created a service to automatically parse maintenance notifications and suppress relevant alarms. This **brought down high severity tickets by 50% week over week**.
- Automated protracted regression tests that previously required manual execution, **reducing weekly effort from 24 developer-hours to 8**.
- Built the CLI frontend for a network virtualization product integrated with automated config CI/CD and regression pipelines, **replacing planned physical lab infrastructure**.

Oracle

June 2021 – July 2021

Software Engineering Intern

Bengaluru, India

- Improved performance and accessibility of historical data by adding support for alternative data stores in the *vmstat* command for Oracle Solaris.

TECHNICAL SKILLS

Languages: Python, Javascript, Typescript, Golang, Java, Kotlin, SQL

AWS: Lambda, DynamoDB, Step Functions, ECS, Fargate, EC2, CDK

Databases: Postgres, MongoDB, DynamoDB

Tools/Infra: Docker, Terraform, Git, CI/CD

EDUCATION

BITS Pilani

B.E. Electronics and Instrumentation Engg. (CGPA: 8.29/10)

Hyderabad, India

Aug. 2018 – July 2022

OPEN SOURCE CONTRIBUTION & PROJECTS

Django | Python Web Framework

- [Fixed](#) a data-corrupting bug related to concurrent select and update on Postgres tables and [fixed](#) a bug that issued redundant SQL queries, improving performance during insertions.

SmartCampus | Mobile App for a Smarter Campus

- Designed and built the backend for a campus food ordering app — 4000+ active users, Rs 3.1 crore in annual transactions.
