EXPERIENCE

Amazon

July 2025 – Present

Software Development Engineer 2

Bengaluru, India

- Designed and delivered an **end-to-end replacement** of a legacy feed health aggregation and alerting system. I built the core aggregation logic, deployed infrastructure across **3 AWS regions**, processing **1M+ feed health signals daily**, and executed a **staged rollout**.
- Designed a Step Functions-based deferred alerting system that **prevents false-positive tickets** during transient failures lasting under 15 minutes. Solved existing race conditions in event-driven delivery using monotonic ordering keys, conditional writes, and workflow ownership checks.
- Implemented customer-managed encryption key support across multiple microservices, **solving complex and launch-blocking security challenges** and **educated the team** on encryption implementations for long term maintainability.
- Drove operational excellence: designed service metrics and composite alarms for operational readiness, upgraded Java runtimes, fixed flaky tests, tuned DLQ alarms, and resolved pagination failures — **reducing operational noise** for on-call engineers.

Zluri

January 2024 – March 2025

Senior Software Engineer

Bengaluru, India

- Improved the notification service through infrastructure improvements, decreasing delivery latency from **2 hours to less than 1 min during peak hours**.
- Led the effort in finalizing a **Postgres** ORM and built an API shadow testing framework as part of a database migration. Automated alerts and reports provided visibility into failing APIs, **reducing the lead time of the project by at least 25%**.
- Performed bug bashes in legacy modules and led code quality initiatives, **reducing on-call tickets by 50%** and reducing tech debt.

Software Engineer

March 2023 - December 2023

- Lead the development of a greenfield project, [Access Reviews](#) over 3 months. Delivered with exceptional code quality and a extensible design. The MVP **created a strong new revenue stream** and further investments in the product.
- Ideated & implemented a development workflow for the organization using feature environments, automated testing etc. This became a bedrock of all engineering efforts, **boosting engineering productivity by upto 30% and improved confidence in product quality**.
- Led code quality initiatives including migration to **Typescript**, linting processes, and monitoring/alerting for all background jobs — **reduced customer complaints by 50%** through proactive on-call resolution.

Amazon - AWS

Feb. 2022 – March 2023

Software Engineer

Bengaluru, India

- Created a service to automatically parse maintenance notifications and suppress relevant alarms. This **brought down high severity tickets by 50% week over week**.
- Reduced weekly effort spent on running manual and protected regression tests by automating it, **reducing time spent on from 24 developer-hours down to 8 hours** every week.
- Worked on an easily deployable network virtualisation product that was integrated with automated network config CI/CD and regression testing pipelines, **reducing cost** by replacing physical infrastructure with virtualized networking labs.

TECHNICAL SKILLS

Languages: Python, Javascript, Typescript, Golang, Java, Kotlin, SQL

AWS: Lambda, DynamoDB, ECS, Fargate, EC2, CDK

EDUCATION

BITS Pilani

B.E. Electronics and Instrumentation Engg. (CGPA: 8.29/10)

Hyderabad, India

Aug. 2018 – July 2022

OPEN SOURCE CONTRIBUTION & PROJECTS

Django | Python Web Framework

- Fixed** a data-corrupting bug related to concurrent select and update on Postgres tables and **fixed** a bug that issued redundant SQL queries, improving performance during insertions.

SmartCampus | Mobile App for a Smarter Campus

- Designed and built the backend for a campus food ordering app — 4000+ active users, Rs 3.1 crore in annual transactions.
